

Strategies for supporting pupils with Special Educational Needs and Disabilities in Maths lessons

Individual Need	Here's how we can help everyone learn...
Attention Deficit Hyperactivity Disorder	<ul style="list-style-type: none"> ● A non-confrontational approach will be used in every aspect of the maths lesson. ● Adult support during the key skills and sessions where children are using whiteboards to record their answers. ● Verbal praise is given whenever necessary to help boost confidence and self-esteem. ● Use of pictorial representations to support the learning taking place. ● Use concrete resources to support new mathematical concepts.
Anxiety	<ul style="list-style-type: none"> ● A trusting relationship will be nurtured between all adults in the classroom and the child. ● This relationship will enable the adult to know any triggers or changes in behaviour that may be caused by the child feeling anxious. ● Giving feedback or answers is encouraged, where appropriate, but is non-compulsory so that children are not 'put on the spot' or made to feel pressured or uncomfortable. Children can respond with 'Can I have some thinking time?' or 'I'm not sure' if asked a question. ● Maths lessons are calm and quiet where children can focus on the learning taking place. ● If children feel overwhelmed by the classroom environment, they can use a quiet break out space or use a sensory aid.
Autistic Spectrum Disorder	<ul style="list-style-type: none"> ● Visual timetables are used to support the organisation where needed. ● Visual cues/resources are used to support the child as necessary throughout the session. ● A learning space is provided that best suits the child. ● There is a consistent approach to the maths

	<p>lesson with any changes made known to the child beforehand.</p> <ul style="list-style-type: none"> ● Sensory breaks are given whenever necessary. ● Mathematical vocabulary is integrated into the lesson throughout, with visuals to support new language. ● Staff support pupils with their understanding by use of appropriate questioning periodically, to identify misconceptions or where further explanation/support is required. ● Staff ensure that the child has a clear understanding of what they are expected to achieve during the lesson.
Dyscalculia	<ul style="list-style-type: none"> ● Concrete resources, manipulatives and visual representations are always made available and are clearly labelled and accessible. ● Adults will ensure children understand how to use these manipulatives to support the specific learning objective. ● Key skills sessions incorporate activities that specifically focus on recall and repeating areas of mathematics the children have already explored. ● Graph/squared paper is used in maths books to support the organisation of written calculation methods and to support understanding of place value. ● Peer and adult support will be built into the lesson throughout to support any corrections with recording. ● Peer teaching will be used as a great way of the child sharing new knowledge that has been learnt.
Dyslexia	<ul style="list-style-type: none"> ● Different coloured paper can be provided for any written recordings. ● A text font size of 12 or above is use for any information sheets/PowerPoint presentations. ● Data, charts and diagrams are clearly organised and structured. ● Specific clear, fonts are used on any writing within the lesson. ● Large spaces for working out will be provided in a maths book, as needed/requested.
Dyspraxia	<ul style="list-style-type: none"> ● A large learning space will be provided as appropriate. ● Instructions can be written out for the child, using different colours for each line, as appropriate. ● Diagrams will be provided before labelling/editing.

	<ul style="list-style-type: none"> • Children can move around the classroom whenever necessary. • When using mathematical equipment, an adult or supportive peer will provide demonstration of how to successfully use the equipment. • Adults will ensure they are watching closely for signs of distress and provide a quiet, calm learning environment.
<p>Hearing Impairment</p>	<ul style="list-style-type: none"> • A suitable working space will be agreed upon between the teacher and child in a safe, private conversation before the lesson. • Adults within the classroom will ensure the child's hearing aid is turned on before the lesson begins • Adults will ensure they are facing the child when they are talking/giving instructions. • Questions and any information given by peers will be repeated clearly to ensure the child has heard what their peers have asked/said. • Children will be seated towards the front of the classroom to ensure they have a clear line of vision, especially during the input where the whiteboard will be the main focus.
<p>Toileting Issues</p>	<ul style="list-style-type: none"> • Children will be able to leave and return to the classroom whenever necessary. • A seating arrangement will be made so that the child can enter and leave the classroom discretely. • All adults and children within the classroom environment will respect the child's privacy.
<p>Cognition and Learning Challenges</p>	<ul style="list-style-type: none"> • Learning is differentiated to meet the child's specific 'learning gaps'. This will ensure that the task being given to the child matches their individual academic needs. • Concrete resources and visual representations will be given to the child to support any calculations needed and to support learning in general. • Self-checks can be used at each stage of a task so that children are aware of the outcome required and their progress in achieving this. • Key vocabulary and ideas will be addressed regularly throughout the maths lesson to check understanding. • Information will be repeated clearly, varying the vocabulary used or re-iterating key vocabulary to support understanding. • SMART pages and PowerPoint slides will be simple and uncluttered with key information highlighted. • Children will be provided with a 'work-buddy' during

	peer activities/opportunities.
Speech, Language and Communication Needs	<ul style="list-style-type: none"> ● Visual timetables, signs and symbols will be used to support communication as required. ● Visual displays (maths working walls) will be used to support understanding of key information. ● Any verbal instructions/information will be at a slow, clear pace that matches the child's understanding. ● Adults will regularly check the child's understanding so that adults can identify any misconceptions or misunderstandings.
Tourette Syndrome	<ul style="list-style-type: none"> ● Adults will listen and respond to the child with support and understanding. ● A structure will be provided (tick list) to support the learning taking place, this will be differentiated to the maths activity and include the main elements needed to aid the child's attention. ● There will be understanding that the activity may not be completed.
Experienced Trauma	<ul style="list-style-type: none"> ● The maths learning environment will be a calm, trusting place where children feel supported with their emotions at all times. ● Adults working with the child will be aware of any triggers and any ways to further support the child within the classroom. ● There will be a consistent approach to expectations and behaviour that are based on positive praise.
Visual Impairment	<ul style="list-style-type: none"> ● Anything that is being displayed (PowerPoint presentation, maths working wall) will be large and easily visible from anywhere in the classroom ● Children will be able to 'take a break' from their maths learning whenever needed to ensure they are able to focus visually and avoid fatigue. ● Images and text within any printed work will be enlarged with the recommended font size. ● Children will be provided with a thicker and darker pencil to ensure their writing is clear. ● Children may be provided with a larger squared exercise book if preferred.
